CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 103 (1999)

Ab initio; Phospholipid; Headgroups; Structure; Conformation; Energy **103**, 137

Activation energies; Glycolipids; Kinetics; Phase transition; Temperature-jump; Non-lamellar phases **103**, 95

Affinity chromatography; Apolipoprotein H; β 2-Glycoprotein I; Concanavalin A; Glycosylation; Lectin **103**, 161

Amphiphile synthesis; Ether lipids; Branched lipids; Fluorinated lipids; Monolayer fluidity; Protein two-dimensional crystallization **103**, 21

Antibiotic; Lipid bilayer membrane; Vesicle; Ionophore; Phase transition; Thermal analysis **103**, 57

Antioxidation; Low-density lipoprotein; Prooxidation; Coumarins **103**, 125

Apolipoprotein H; β 2-Glycoprotein I; Affinity chromatography; Concanavalin A; Glycosylation; Lectin **103**, 161

Branched lipids; Amphiphile synthesis; Ether lipids; Fluorinated lipids; Monolayer fluidity; Protein two-dimensional crystallization **103**, 21

Brassinosteroids; Steroidal lactones; Inhoffen adducts; Hydride reduction **103**, 117

Concanavalin A; Apolipoprotein H; β 2-Glycoprotein I; Affinity chromatography; Glycosylation; Lectin **103**, 161

Conformation; Phospholipid; Headgroups; Ab initio; Structure; Energy **103**, 137

Conformations; Squalene derivatives; NMR; Molecular mechanics and dynamics **103**, 67

Coumarins; Low-density lipoprotein; Antioxidation; Prooxidation **103**, 125

Crystallization kinetics; Fluidity; Lipid monolayer; Lipid specific area; Protein two-dimensional crystallization; Resolution **103**, 37

Energy; Phospholipid; Headgroups; Ab initio; Structure; Conformation **103**, 137

Ether lipids; Amphiphile synthesis; Branched lipids; Fluorinated lipids; Monolayer fluidity; Protein two-dimensional crystallization **103**, 21

Fluidity; Crystallization kinetics; Lipid monolayer; Lipid specific area; Protein two-dimensional crystallization; Resolution **103**, 37

Fluorinated lipids; Amphiphile synthesis; Ether lipids; Branched lipids; Monolayer fluidity; Protein two-dimensional crystallization **103**, 21

Glycerol tri-esters; Nuclear magnetic resonance; Vegetable oils **103**, 47

Glycolipids; Kinetics; Phase transition; Temperature-jump; Activation energies; Non-lamellar phases **103**, 95

β2-Glycoprotein I; Apolipoprotein H; Affinity chromatography; Concanavalin A; Glycosylation; Lectin **103**, 161

Glycosylation; Apolipoprotein H; β 2-Glycoprotein I; Affinity chromatography; Concanavalin A; Lectin **103**, 161

Headgroups; Phospholipid; Ab initio; Structure; Conformation; Energy **103**, 137

Hydride reduction; Brassinosteroids; Steroidal lactones; Inhoffen adducts **103**, 117

Inhoffen adducts; Brassinosteroids; Steroidal lactones; Hydride reduction **103**, 117

Ionophore; Lipid bilayer membrane; Vesicle; Antibiotic; Phase transition; Thermal analysis **103**, 57

PII: S0009-3084(99)00117-6

Kinetics; Glycolipids; Phase transition; Temperature-jump; Activation energies; Non-lamellar phases **103**, 95

Large unilamellar vesicles; Ultrasound interaction; Phospholipid phase transition **103**, 1

Lectin; Apolipoprotein H; β 2-Glycoprotein I; Affinity chromatography; Concanavalin A; Glycosylation **103**, 161

Lipid bilayer membrane; Vesicle; Antibiotic; Ionophore; Phase transition; Thermal analysis **103**, 57

Lipid monolayer; Crystallization kinetics; Fluidity; Lipid specific area; Protein two-dimensional crystallization; Resolution **103**, 37

Lipid polymorphism; Membrane fusion; Peptide–lipid interaction; Nonlamellar phase; Membrane morphology **103**, 11

Lipid specific area; Crystallization kinetics; Fluidity; Lipid monolayer; Protein two-dimensional crystallization; Resolution **103**, 37

Low-density lipoprotein; Antioxidation; Prooxidation; Coumarins **103**, 125

Membrane fusion; Lipid polymorphism; Peptide–lipid interaction; Nonlamellar phase; Membrane morphology **103**, 11

Membrane morphology; Membrane fusion; Lipid polymorphism; Peptide–lipid interaction; Nonlamellar phase **103**, 11

Molecular dynamics; Squalene derivatives; 2,3-Oxidosqualene cyclases inhibitors; NMR; Solvent induced folding **103**, 81

Molecular mechanics and dynamics; Squalene derivatives; NMR; Conformations **103**, 67

Monolayer fluidity; Amphiphile synthesis; Ether lipids; Branched lipids; Fluorinated lipids; Protein two-dimensional crystallization **103**, 21

NMR; Squalene derivatives; Molecular mechanics and dynamics; Conformations **103**, 67

NMR; Squalene derivatives; 2,3-Oxidosqualene cyclases inhibitors; Molecular dynamics; Solvent induced folding **103**, 81

Nonlamellar phase; Membrane fusion; Lipid polymorphism; Peptide–lipid interaction; Membrane morphology **103**, 11

Non-lamellar phases; Glycolipids; Kinetics; Phase transition; Temperature-jump; Activation energies **103**, 95

Nuclear magnetic resonance; Glycerol tri-esters; Vegetable oils **103**, 47

2,3-Oxidosqualene cyclases inhibitors; Squalene derivatives; NMR; Molecular dynamics; Solvent induced folding **103**, 81

Peptide–lipid interaction; Membrane fusion; Lipid polymorphism; Nonlamellar phase; Membrane morphology **103**, 11

Phase transition; Glycolipids; Kinetics; Temperature-jump; Activation energies; Non-lamellar phases **103**, 95

Phase transition; Lipid bilayer membrane; Vesicle; Antibiotic; Ionophore; Thermal analysis **103**, 57

Phospholipid; Headgroups; Ab initio; Structure; Conformation; Energy **103**, 137

Phospholipid phase transition; Ultrasound interaction; Large unilamellar vesicles **103**, 1

Prooxidation; Low-density lipoprotein; Antioxidation; Coumarins **103**, 125

Protein two-dimensional crystallization; Amphiphile synthesis; Ether lipids; Branched lipids; Fluorinated lipids; Monolayer fluidity **103**, 21

Protein two-dimensional crystallization; Crystallization kinetics; Fluidity; Lipid monolayer; Lipid specific area; Resolution **103**, 37

Resolution; Crystallization kinetics; Fluidity; Lipid monolayer; Lipid specific area; Protein two-dimensional crystallization **103**, 37

Solvent induced folding; Squalene derivatives; 2,3-Oxidosqualene cyclases inhibitors; NMR; Molecular dynamics **103**, 81

Squalene derivatives; NMR; Molecular mechanics and dynamics; Conformations **103**, 67

Squalene derivatives; 2,3-Oxidosqualene cyclases inhibitors; NMR; Molecular dynamics; Solvent induced folding **103**, 81

Steroidal lactones; Brassinosteroids; Inhoffen adducts; Hydride reduction **103**, 117

Structure; Phospholipid; Headgroups; Ab initio; Conformation; Energy **103**, 137

Temperature-jump; Glycolipids; Kinetics; Phase transition; Activation energies; Non-lamellar phases **103**, 95

Thermal analysis; Lipid bilayer membrane; Vesicle; Antibiotic; Ionophore; Phase transition **103**, 57

Ultrasound interaction; Large unilamellar vesicles; Phospholipid phase transition **103**, 1

Vegetable oils; Glycerol tri-esters; Nuclear magnetic resonance **103**, 47

Vesicle; Lipid bilayer membrane; Antibiotic; Ionophore; Phase transition; Thermal analysis **103**, 57
